THE PUBLIC IS MORE FAMILIAR WITH BAD DESIGN THAN GOOD DESIGN. IT IS, IN EFFECT, CONDITIONED TO PREFER BAD DESIGN, BECAUSE THAT IS WHAT IT LIVES WITH. THE NEW BECOMES THREATENING, THE OLD REASSURING.

PAUL RAND

A DESIGNER KNOWS THAT HE HAS ACHIEVED PERFECTION NOT WHEN THERE IS NOTHING LEFT TO ADD, BUT WHEN THERE IS NOTHING LEFT TO TAKE AWAY.

ANTOINE DE SAINT-EXUPÉRY

. . . THE DESIGNER OF A NEW SYSTEM MUST NOT ONLY BE THE IMPLEMENTOR AND THE FIRST LARGE-SCALE USER; THE DESIGNER SHOULD ALSO WRITE THE FIRST USER MANUAL. . . IF I HAD NOT PARTICIPATED FULLY IN ALL THESE ACTIVITIES, LITERALLY HUNDREDS OF IMPROVEMENTS WOULD NEVER HAVE BEEN MADE, BECAUSE I WOULD NEVER HAVE THOUGHT OF THEM OR PERCEIVED WHY THEY WERE IMPORTANT.

List of Figures

List of Tables

List of Algorithms

Dedicated to those who appreciate LaTeX

and the work of Edward R. Tufte and Donald E. Knuth.

About This Book

This book serves (1) to test and (2) to illustrate features of the Tufte book template, using the material from the original template and various inserts from our article drafts. This book has three chapters with two sections in each chapter. The chapter titles are: *(1): About Text Items*, *(2): About Figures*, and *(3): About Tables*. Each chapter has two sections, (1) dealing with items from Tufte's book template, (2) dealing with inserts from our article drafts.

Template incompatibilites with our article drafts include (so far):

- Neither the `subfigure` nor the `subcaption` packages are compatible with this template; this necessitates that subfigure labels such as (a), (b), etc should become an integral part of the subfigure. In other words, if the subfigure is created in R, the label created in R should extend to (a), or (b), etc.
- The package `cite` is not compatible, so when we list 5 citations with a single `\cite` command, it is not possible for these citations to appear in a contracted form such as [1]-[5].
- *NO* citations can be placed inside either figure or table captions. However, with each of these captions, one *can* place hyperlinks with the `\url` command, and one *can* refer to other figures and tables with the `\ref` command. Also, *NO* `\verb` commands can be placed inside either figure or table captions!

Still, the workarounds to avoid these incompatibilites are rewarded the with well-designed book layout that this template enables.

And now, filler text with command `\lipsum[2]`. Nam dui ligula, fringilla a, euismod sodales, sollicitudin vel, wisi. Morbi auctor lorem non justo. Nam lacus libero, pretium at, lobortis vitae, ultricies et, tellus. Donec aliquet, tortor sed accumsan bibendum, erat ligula aliquet magna, vitae ornare odio metus a mi. Morbi ac orci et nisl hendrerit mollis. Suspendisse ut massa. Cras nec ante. Pellentesque a nulla. Cum sociis natoque penatibus et magnis dis parturient montes, nascetur ridiculus mus. Aliquam tincidunt urna. Nulla ullamcorper vestibulum turpis. Pellentesque cursus luctus mauris.

1
About Text Items

Text items in this chapter are divided into three sections:
(1) about notational conventions and schema of LaTeX files,
(2) text items selected from Tufte's book template,
(3) text items from other sources,
(4) typesetting examples of algorithms.

For details about how figures and tables are being represented, see Chapters 2 and 3. For additional examples of algorithms, see Chapter 4.

1.1 *About Notational Conventions and Schema for LaTeX files*

When collaborating with multiple authors using LaTeX, conventions about notation and file structures will save a lot of time. The schema in Figure 1.1 already illustrates a number of conventions that are being used in this document. The list below includes not only the items which are in plain sight in Figure 1.1, it also includes items we can observe in subdirectories *Algorithms*, *Figures*, and *Tables* as well as the *.tex files in these subdirectories.

.

- Consistently avoid file names with *underscore* (_).
- For complex algorithms, figures and tables, create a separate file which is prefixed with either `alg-`, `fg-` or `tb-` and move the file into the designated subdirectory. Use the rootname of the file for the label that is used to reference the algorithm, figure, or table. For example, we can thus refer to contents of file alg-global-search2-normal.tex as `Algorithm~\ref{alg-global-search2-normal}`. Notably, we embed contents of algorithm not only under `\algorithm`, `\algorithm-wide` environments but also under `\figure`, `\figure*` environments.
- There is always the easy-to-find-file `A00-main.tex`. This file not only invokes `\documentclass{tufte-book}` and the supporting files *tufte*, but also all items that are generic to the layout of the book and new command defitions that are content-specific with respect to the book. Finaly, this file also invokes the book chapters in a well-defined sequence such as Ch-About.tex, Ch-Figures.tex, Ch-Tables.tex, and Ch-Algorithms2.tex. The amount of text in a typical chapter will rarely extend beyond a single page since each chapter is likely to invoke a number of sections that reside in adjacent files and may represent contributions from several collaborating authors. For example, Ch-About.tex invokes four files in this order: Ch-About-Conventions.tex, Ch-About-Tufte.tex, Ch-About-Other.tex, Ch-About-Algorithms.tex.
- The only *.bib file in the directory ebook-test, bibTemp.bib, is initially an empty file. Within the file `A00-main.tex`, we use relative paths to define location of the 'nearby files' OPUS.bib and OPUS2.bib under xLatex: `\bibliography{\detokenize{../../OPUS}, \detokenize{../../OPUS2}, \detokenize{./bibTemp}}`. Both files, OPUS.bib and OPUS2.bib, are almost always up-to-date for use by all project participants, so the need for temporary bib items under the file bibTemp.bib seldom arises.

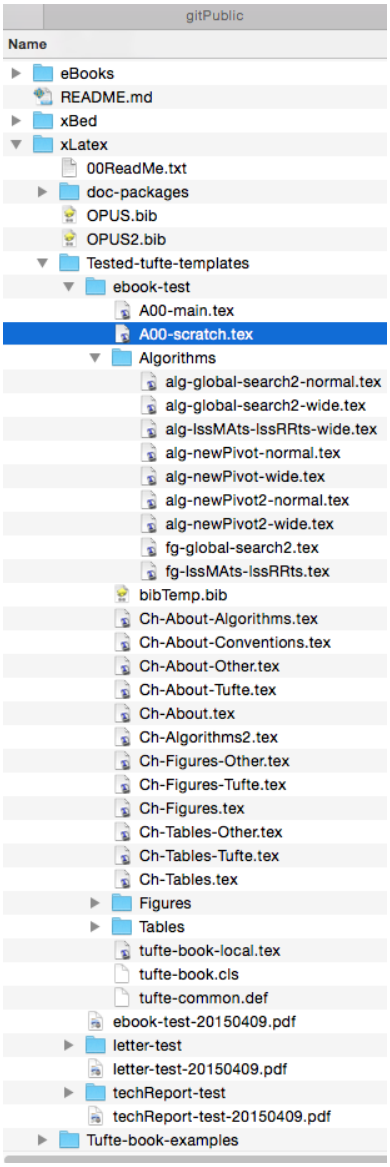

Figure 1.1: Notational conventions and schema for LaTeX files to support collaboration.

1.2 *Text Items Selected from Tufte's Book Template*

THE PRIMARY TEXT ITEMS for this section are selections from Tufte Book Template[1] Here, we extracted three sections from the Chapter on *On the Use of the tufte-book Document Class*: From this template, have extracted three sections

[1] The Tufte Book Template can be accessed at `https://github.com/Tufte-LaTeX/tufte-latex`.

- Page Layout: Headings
- Sidenotes
- References

However, in this document, we treat all of these three sections as subsections.

Page Layout: Headings

TUFTE'S BOOKS include the following heading levels: parts, chapters,[2] sections, subsections, and paragraphs. Not defined by default are: sub-subsections and subparagraphs.

[2] Parts and chapters are defined for the `tufte-book` class only.

Heading	Style	Size
Part	roman	24/36×40 pc
Chapter	italic	20/30×40 pc
Section	italic	12/16×26 pc
Subsection	italic	11/15×26 pc
Paragraph	italic	10/14

Table 1.1: Heading styles used in *Beautiful Evidence*.

Paragraph Paragraph headings (as shown here) are introduced by italicized text and separated from the main paragraph by a bit of space.

This style provides A- and B-heads (that is, `\section` and `\subsection`), demonstrated above.

If you need more than two levels of section headings, you'll have to define them yourself at the moment; there are no pre-defined styles for anything below a `\subsection`. As Bringhurst points out in *The Elements of Typographic Style*,[3] you should "use as many levels of headings as you need: no more, and no fewer."

[3] Robert Bringhurst. *The Elements of Typography*. Hartley & Marks, 3.1 edition, 2005

The Tufte-LaTeX classes will emit an error if you try to use `\subsubsection` and smaller headings.

IN HIS LATER BOOKS,[4] Tufte starts each section with a bit of vertical space, a non-indented paragraph, and sets the first few words of the

[4] Edward R. Tufte. *Beautiful Evidence*. Graphics Press, LLC, first edition, May 2006

sentence in SMALL CAPS. To accomplish this using this style, use the `\newthought` command:

```
\newthought{In his later books}, Tufte starts...
```

Sidenotes

One of the most prominent and distinctive features of this style is the extensive use of sidenotes. There is a wide margin to provide ample room for sidenotes and small figures. Any `\footnotes` will automatically be converted to sidenotes.[5] If you'd like to place ancillary information in the margin without the sidenote mark (the superscript number), you can use the `\marginnote` command.

The specification of the `\sidenote` command is:

`\sidenote[`⟨*number*⟩`][`⟨*offset*⟩`]{`*Sidenote text.*`}`

Both the ⟨*number*⟩ and ⟨*offset*⟩ arguments are optional. If you provide a ⟨*number*⟩ argument, then that number will be used as the sidenote number. It will change of the number of the current sidenote only and will not affect the numbering sequence of subsequent sidenotes.

Sometimes a sidenote may run over the top of other text or graphics in the margin space. If this happens, you can adjust the vertical position of the sidenote by providing a dimension in the ⟨*offset*⟩ argument. Some examples of valid dimensions are:

```
1.0in    2.54cm    254mm    6\baselineskip
```

If the dimension is positive it will push the sidenote down the page; if the dimension is negative, it will move the sidenote up the page.

While both the ⟨*number*⟩ and ⟨*offset*⟩ arguments are optional, they must be provided in order. To adjust the vertical position of the sidenote while leaving the sidenote number alone, use the following syntax:

`\sidenote[][`⟨*offset*⟩`]{`*Sidenote text.*`}`

The empty brackets tell the `\sidenote` command to use the default sidenote number.

If you *only* want to change the sidenote number, however, you may completely omit the ⟨*offset*⟩ argument:

`\sidenote[`⟨*number*⟩`]{`*Sidenote text.*`}`

The `\marginnote` command has a similar *offset* argument:

`\marginnote[`⟨*offset*⟩`]{`*Margin note text.*`}`

[5] This is a sidenote that was entered using the `\footnote` command.

This is a margin note. Notice that there isn't a number preceding the note, and there is no number in the main text where this note was written.

References

References are placed alongside their citations as sidenotes, as well. This can be accomplished using the normal `\cite` command.[6]

The complete list of references may also be printed automatically by using the `\bibliography` command. (See the end of this document for an example.) If you do not want to print a bibliography at the end of your document, use the `\nobibliography` command in its place.

To enter multiple citations at one location,[7] you can provide a list of keys separated by commas and the same optional vertical offset argument: `\cite{Tufte2006,Tufte1990}`.

`\cite[`⟨*offset*⟩`]{`*bibkey1*`,`*bibkey2*`,...}`

[6] The first paragraph of this document includes a citation.

[7] Edward R. Tufte. *Beautiful Evidence*. Graphics Press, LLC, first edition, May 2006; and Edward R. Tufte. *Envisioning Information*. Graphics Press, Cheshire, Connecticut, 1990

1.3 *About Text Items from Other Sources*

THE PRIMARY TEXT ITEMS for this section are selections from[8].

The command `\cmt` as listed below, [creates a 'comment' sentence like this one.]

```
\newcommand{\cmt}[1]{\textsf{[#1]}}
```

The command `\OMIT` as listed below

```
\newcommand{\OMIT}[1]{}
```

suppresses a block of text listed in the latex source code below (it makes it invisible).

Local paragraph. This boldface headings, terminated with a period, *Local paragraph.* has been created by using the local command `\TOPIC`: see the command below

```
\newcommand{\TOPIC}[1]{\vspace{1.3ex}\par\noindent\textbf{#1.}}
```

NOTE: such heading may be considered 'too bold' in the context of Tufte's ideas in *Beautiful Evidence*.

Tufte's Paragraph Paragraph headings (as shown here) are introduced by italicized text and separated from the main paragraph by a bit of space. The command is

```
\paragraph{}
```

About the labs problem. The *aperiodic low-autocorrelation binary sequence* (`labs`) problem has a simple formulation: take a binary sequence of length L, $S = s_1 s_2 \ldots s_L$, $s_i \in \{+1, -1\}$, the autocorrelation function $C_k(S) = \sum_{i=1}^{L-k} s_i s_{i+k}$, and minimize the energy function:

$$E(S) = \sum_{k=1}^{L-1} C_k^2(S) \tag{1.1}$$

or alternatively, maximize the *merit factor* F[9]:

$$F(S) = L^2/(2E(S)). \tag{1.2}$$

The asymptotic value for the maximum merit factor F, introduced by Golay, has been re-derived using arguments from statistical mechanics[10]:

$$\text{as} \quad L \to \infty, \quad \text{then} \quad F \to 12.3248 \tag{1.3}$$

The publication of the asymptotic value in Eq. 1.3 is providing an on-going challenge since no published solutions can yet claim to converge to this value as the length of the sequence increases.

Creating a filler text. The remainder of this paragraph has been created with the command `\lipsum[4]`. Quisque ullamcorper placerat ipsum. Cras nibh. Morbi vel justo vitae lacus tincidunt ultrices.

Vivamus quis tortor vitae risus porta vehicula.

More about the labs problem. Finding the optimum sequence is significantly harder than solving the special cases of the Ising spin-glass problems with limited interaction and periodic boundary conditions, for example[11]. While effective methods have been presented to solve the special cases[12], up to $L = 400$, the best merit factors that has also been *proven optimal* for the problem as formulated in Eq. 1.2 are presently known for values of $L \leq 60$ only[13]. A web page of `labs` best merit factors and solutions, up to the sequence length of $L = 304$, has been compiled by Joshua Knauer in 2002. This page is no longer accessible and has now been restored at two mirroring sites[14] next to additional and comprehensive tables of *best-value solutions*. These tables contain not only updates on the best known figures of merit but also on the number of *unique* solutions in *canonic form* and the solutions themselves.

Now, we need more text on this page if we are to make extra space for the citation that should be moved into the margins on the next page. Can or should we have *some citations* not appear in the margin, only at under Bibliography at the very end? Such a feature would not appear logical in the context of Tufte's book template, would it? The message from Tufte's book template seem to be: do not overcrowd with citations on any given page, have sufficient text to justify the introduction (and context) of any new citation ... This criterion can be considered different for books when compared to peer-reviewed article ...

This text has been created with the command `\lipsum[4]`. Lorem ipsum dolor sit amet, consectetuer adipiscing elit. Ut purus elit, vestibulum ut, placerat ac, adipiscing vitae, felis. diam. Duis eget orci sit amet orci dignissim rutrum.

Relationships between results reported in[15] and[16], and all subsequent updates under[17] are depicted in four panels in Figure 2.4 (See Chapter 2. The latest experimental results support the trend towards the conjectured asymptotic value of $F = 12.3248$, however as we demonstrate later on in the paper, the computational cost to reach this value may well exceed the currently available resources unless a better solver is discovered.

1.4 *Typesetting Examples of Algorithms*

THERE ARE A NUMBER of examples of algorithms in this section. For additional examples of algorithms, see Chapter 4.

Quisque ullamcorper placerat ipsum. Cras nibh. Morbi vel justo vitae lacus tincidunt ultrices. Lorem ipsum dolor sit amet, consectetuer adipiscing elit. In hac habitasse platea dictumst. Integer tempus convallis augue. Etiam facilisis. Nunc elementum fermentum wisi. Aenean placerat. Ut imperdiet, enim sed gravida sollicitudin, felis odio placerat quam, ac pulvinar elit purus eget enim. Nunc vitae tortor. Proin tempus nibh sit amet nisl. Vivamus quis tortor vitae risus porta vehicula.

Algorithm 1 Procedure newPivot.saw – normal width.

1: **procedure** `newPivot.saw`($\underline{\varsigma}_{\omega_s-1}, Walk_{\omega_s-1}$)
2: $\mathbb{Z} \leftarrow i = 1, 2, \ldots, L$
3: $\mathbb{Z}_p \leftarrow permute(\mathbb{Z})$
4: $\mathcal{N}(\underline{\varsigma}_{\omega_s-1}) \leftarrow \{\underline{\varsigma}^i_{\omega_s-1} | d(\underline{\varsigma}_{\omega_s-1}, \underline{\varsigma}^i_{\omega_s-1}) = 1, i \in \mathbb{Z}_p\}$
5: $\mathcal{N}_{saw}(\underline{\varsigma}_{\omega_s-1}) \leftarrow \{\mathcal{N}(\underline{\varsigma}_{\omega-1}) | \underline{\varsigma}^i_{\omega_s-1} \notin Walk_{\omega_s-1}\}$
6: **if** $\mathcal{N}_{saw}(\underline{\varsigma}_{\omega_s-1}) \neq \emptyset$ **then**
7: $\underline{\varsigma}_{\omega_s} : \Theta(\underline{\varsigma}_{\omega_s}) \leftarrow$ `bestNeighbor`$(\mathcal{N}_{saw}(\underline{\varsigma}_{\omega_s-1}))$
8: $Walk_{\omega_s} \leftarrow Walk_{\omega_s-1} \cup \{\underline{\varsigma}_{\omega_s}\}$
9: $\tau \leftarrow \tau + |\mathcal{N}_{saw}(\underline{\varsigma}_{\omega_s-1})|$ ▷ update *cntProbe*
10: **else** ▷ **deal with a trapped pivot**
11: $\beta = \beta + 1$
12: $\underline{\varsigma}_{\omega_s} : \Theta(\underline{\varsigma}_{\omega_s}) \leftarrow$ `coordInit`() ▷ re-initialize
13: $Walk_{\omega_s} \leftarrow \{\underline{\varsigma}_{\omega_s}\}$
14: $\tau \leftarrow \tau + 1$ ▷ update *cntProbe*
15: **end if**
16: **return** $Walk_{\omega_s} : \underline{\varsigma}_{\omega_s} : \Theta(\underline{\varsigma}_{\omega_s})$
17: **end procedure**

THE ALGORITHM EXAMPLES are listed in this order:

1. Algorithm 1 is in-line and normal width.
2. Algorithm 2 is in-line and full-width below a full-width Figure 2.3.
3. Algorithm 3 is on a full page and normal width.
4. Algorithm 3 is on a full page and full-width.
5. Algorithm 5 is at the top of the page and full-width.

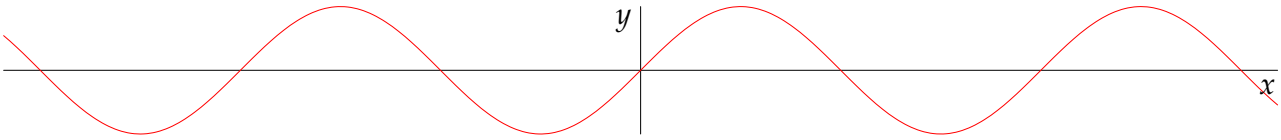

Figure 1.2: This graph shows $y = \sin x$ from about $x = [-10, 10]$. *Notice that this figure takes up the full page width.*

Algorithm 2 Procedure newPivot.saw – using algorithm-wide environment.

1: **procedure** `newPivot.saw`($\underline{\varsigma}_{\omega_s-1}, Walk_{\omega_s-1}$)
2: $\mathbb{Z} \leftarrow i = 1, 2, \ldots, L$
3: $\mathbb{Z}_p \leftarrow permute(\mathbb{Z})$
4: $\mathcal{N}(\underline{\varsigma}_{\omega_s-1}) \leftarrow \{\underline{\varsigma}^i_{\omega_s-1} | d(\underline{\varsigma}_{\omega_s-1}, \underline{\varsigma}^i_{\omega_s-1}) = 1, i \in \mathbb{Z}_p\}$
5: $\mathcal{N}_{saw}(\underline{\varsigma}_{\omega_s-1}) \leftarrow \{\mathcal{N}(\underline{\varsigma}_{\omega-1}) | \underline{\varsigma}^i_{\omega_s-1} \notin Walk_{\omega_s-1}\}$
6: **if** $\mathcal{N}_{saw}(\underline{\varsigma}_{\omega_s-1}) \neq \emptyset$ **then**
7: $\underline{\varsigma}_{\omega_s} : \Theta(\underline{\varsigma}_{\omega_s}) \leftarrow$ `bestNeighbor`$(\mathcal{N}_{saw}(\underline{\varsigma}_{\omega_s-1}))$
8: $Walk_{\omega_s} \leftarrow Walk_{\omega_s-1} \cup \{\underline{\varsigma}_{\omega_s}\}$
9: $\tau \leftarrow \tau + | \mathcal{N}_{saw}(\underline{\varsigma}_{\omega_s-1}) |$ ▷ update *cntProbe*
10: **else** ▷ **deal with a trapped pivot**
11: $\beta = \beta + 1$
12: $\underline{\varsigma}_{\omega_s} : \Theta(\underline{\varsigma}_{\omega_s}) \leftarrow$ `coordInit`$()$ ▷ re-initialize
13: $Walk_{\omega_s} \leftarrow \{\underline{\varsigma}_{\omega_s}\}$
14: $\tau \leftarrow \tau + 1$ ▷ update *cntProbe*
15: **end if**
16: **return** $Walk_{\omega_s} : \underline{\varsigma}_{\omega_s} : \Theta(\underline{\varsigma}_{\omega_s})$
17: **end procedure**

NOTABLY, typesetting of the Algorithm 2 results in excessive width, for better rendition of identical algorithm, see Algorithm 1 in the preceding page.

Quisque ullamcorper placerat ipsum. Cras nibh. Morbi vel justo vitae lacus tincidunt ultrices. Lorem ipsum dolor sit amet, consectetuer adipiscing elit. In hac habitasse platea dictumst. Integer tempus convallis augue. Etiam facilisis. Nunc elementum fermentum wisi. Aenean placerat. Ut imperdiet, enim sed gravida sollicitudin, felis odio placerat quam, ac pulvinar elit purus eget enim. Nunc vitae tortor. Proin tempus nibh sit amet nisl. Vivamus quis tortor vitae risus porta vehicula.

ON THE NEXT PAGE, Algorithm 3 takes a full page at normal width. However, the version in Algorithm 4 describes the same algorithm, also on a full page, but in a wider, easier-to-read format.

Algorithm 3 A fully instrumented version of solver `lss0rel` – normal width.

procedure `lss0rel`($\sigma_0, \Theta_L^{ub}, t_{lmt}, \omega_{lmt}$)
  $\underline{\varsigma}_0 : \Theta(\underline{\varsigma}_0) \leftarrow$ `coordInit`(σ_0) ▷ initial solution
  $\tau \leftarrow 1$ ▷ initialize cntProbe
  $\underline{\varsigma}^* : \Theta(\underline{\varsigma}^*) \leftarrow \underline{\varsigma}_0 : \Theta(\underline{\varsigma}_0)$ ▷ initial best solution
  $isCens \leftarrow 0$ ▷ initialize *isCensored*
  $tgReached \leftarrow 0$ ▷ initialize *targetReached*
  $\beta \leftarrow 0$ ▷ initialize *cntTrapped*
  $\omega \leftarrow 0$ ▷ initialize total number of steps
  while true do
    $\omega_s : \underline{\varsigma}^* : \Theta(\underline{\varsigma}^*) \leftarrow$ `walk.saw`($\underline{\varsigma}_0 : \Theta(\underline{\varsigma}_0), t_{lmt}, \omega_{lmt}$) ▷ return a completed walk segment
    $\omega \leftarrow \omega + \omega_s$ ▷ update total number of steps
    if $\Theta(\underline{\varsigma}^*) \leq \Theta_L^{ub}$ **then**
      if $\Theta(\underline{\varsigma}^*) = \Theta_L^{ub}$ **then**
        $tgReached = 1$ ▷ upper-bound is reached
      else
        $tgReached = 2$ ▷ upper-bound is improved
      end if
      break
    end if
    if $t \geq t_{lmt}$ **then**
      $isCens \leftarrow 1$ ▷ return solution as "censored"
      break
    end if
    $\underline{\varsigma}_0 : \Theta(\underline{\varsigma}_0) \leftarrow$ `coordInit`() ▷ initialize a new walk segment
    $\tau \leftarrow \tau + 1$ ▷ update *cntProbe*
    $\omega \leftarrow \omega + 1$ ▷ update total number of steps
  end while
  $Table \leftarrow (\sigma_0, \underline{\varsigma}^*, \Theta(\underline{\varsigma}^*), \omega, \tau, t, isCens, tgReached)$
end procedure

procedure `walk.saw`($\underline{\varsigma}_0 : \Theta(\underline{\varsigma}_0), t_{lmt}, \omega_{lmt}$)
  if $\Theta(\underline{\varsigma}_0) \leq \Theta(\underline{\varsigma}^*)$ **then**
    $\underline{\varsigma}^* : \Theta(\underline{\varsigma}^*) \leftarrow \underline{\varsigma}_0 : \Theta(\underline{\varsigma}_0)$ ▷ new best solution
  end if
  $\omega_s \leftarrow 0$ ▷ walk segment length
  $Walk_0 \leftarrow \{\underline{\varsigma}_0\}$ ▷ new walk segment
  while $\Theta(\underline{\varsigma}^*) > \Theta_L^{ub}$ **and** $\omega_s < \omega_{lmt}$ **do**
    if $t \geq t_{lmt}$ **then** ▷ timeout
      break
    end if
    $\omega_s = \omega_s + 1$ ▷ **a new step!**
    $Walk_{\omega_s} : \underline{\varsigma}_{\omega_s} : \Theta(\underline{\varsigma}_{\omega_s}) \leftarrow$
      $\leftarrow$ `newPivot.saw`($\underline{\varsigma}_{\omega_s - 1}, Walk_{\omega_s - 1}$)

9: $\Theta(\underline{\varsigma}^*) \leftarrow$ `ValueBest(pop)`
10: **end while**
11: **end procedure**

2
About Figures

FIGURES IN THIS CHAPTER are divided into two sections: (1) figures from Tufte, (2) figures from other sources.

FOR DETAILS about how various text items are being represented, see Chapter 1.

2.1 *Figures from Tufte*

ABOUT THE FIGURES from Tufte:

- a margin figure, `fg-tufte-margin-helix`, Figure 2.1,
- a normal-width figure, `fg-tufte-normal-hilbertcurves`, Figure 2.2, and
- a full-width figure, `fg-tufte-wide-sine`, Figure 2.3.

.

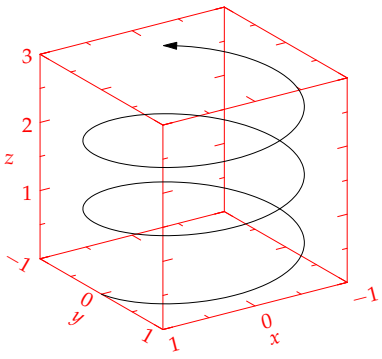

Figure 2.1: This is a margin figure. The helix is defined by $x = \cos(2\pi z)$, $y = \sin(2\pi z)$, and $z = [0, 2.7]$. The figure was drawn using Asymptote (`http://asymptote.sf.net/`).

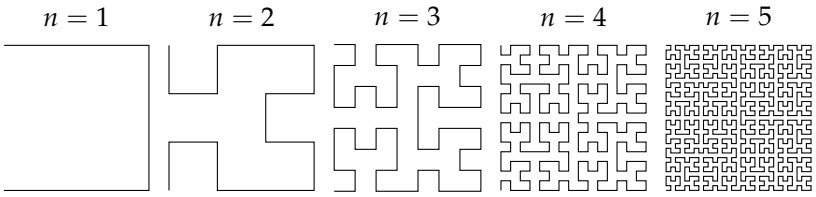

Figure 2.2: Hilbert curves of various degrees n. *Notice that this figure only takes up the main textblock width.*

Nam dui ligula, fringilla a, euismod sodales, sollicitudin vel, wisi. Morbi auctor lorem non justo. Nam lacus libero, pretium at, lobortis vitae, ultricies et, tellus. Donec aliquet, tortor sed accumsan bibendum, erat ligula aliquet magna, vitae ornare odio metus a mi. Morbi ac orci et nisl hendrerit mollis. Suspendisse ut massa. Cras nec ante.

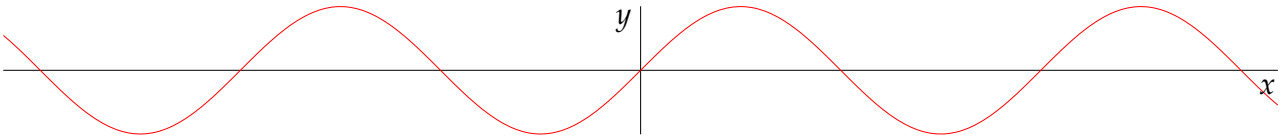

Figure 2.3: This graph shows $y = \sin x$ from about $x = [-10, 10]$. *Notice that this figure takes up the full page width.*

Pellentesque a nulla. Cum sociis natoque penatibus et magnis dis parturient montes, nascetur ridiculus mus. Aliquam tincidunt urna. Nulla ullamcorper vestibulum turpis. Pellentesque cursus luctus mauris.

2.2 *Figures from Other Sources*

The file `fg-R-labs-wide-4-figures.tex` renders Figure 2.4, used in[1]. Lorem ipsum dolor sit amet, consectetuer adipiscing elit. Ut purus elit, vestibulum ut, placerat ac, adipiscing vitae, felis. Curabitur dictum gravida mauris. Nam arcu libero, nonummy eget, consectetuer id, vulputate a, magna. Donec vehicula augue eu neque. Pellentesque habitant morbi tristique senectus et netus et malesuada fames ac turpis egestas. Mauris ut leo. Cras viverra metus rhoncus sem. Nulla et lectus vestibulum urna fringilla ultrices. Phasellus eu tellus sit amet tortor gravida placerat. Integer sapien est, iaculis in, pretium quis, viverra ac, nunc. Praesent eget sem vel leo ultrices bibendum. Aenean faucibus. Morbi dolor nulla, malesuada eu, pulvinar at, mollis ac, nulla. Curabitur auctor semper nulla. Donec varius orci eget risus. Duis nibh mi, congue eu, accumsan eleifend, sagittis quis, diam. Duis eget orci sit amet orci dignissim rutrum.

About Tables

Tables in this chapter are divided into two sections: (1) tables from Tufte, (2) tables from other sources.

For details about how various text items are being represented, see Chapter 1.

3.1 Tables from Tufte

About the tables from Tufte: Quisque ullamcorper placerat ipsum. Cras nibh. Morbi vel justo vitae lacus tincidunt ultrices. Lorem ipsum dolor sit amet, consectetuer adipiscing elit. In hac habitasse platea dictumst. Integer tempus convallis augue. Etiam facilisis. Nunc elementum fermentum wisi. Aenean placerat. Ut imperdiet, enim sed gravida sollicitudin, felis odio placerat quam, ac pulvinar elit purus eget enim. Nunc vitae tortor. Proin tempus nibh sit amet nisl. Vivamus quis tortor vitae risus porta vehicula.

- a normal-width table, `tb-tufte-normal-headings`, Table 3.1,
- a normal-width table, `tb-tufte-normal-fontSizes`, Table 3.2,
- a normal-width table, `tb-tufte-normal-environmentStyles`, Table 3.3,
- a normal-width table, `tb-tufte-normal-environmentStyles`, Table 3.4, and
- a wide table, `tb-tufte-wide-extraColumn`, Table 3.5.

Heading	Style	Size
Part	roman	24/36×40 pc
Chapter	italic	20/30×40 pc
Section	italic	12/16×26 pc
Subsection	italic	11/15×26 pc
Paragraph	italic	10/14

Table 3.1: Heading styles used in *Beautiful Evidence*.

LaTeX size	Font size	Leading	Used for
`\tiny`	5	6	sidenote numbers
`\scriptsize`	7	8	–
`\footnotesize`	8	10	sidenotes, captions
`\small`	9	12	quote, quotation, and verse environments
`\normalsize`	10	14	body text
`\large`	11	15	B-heads
`\Large`	12	16	A-heads, TOC entries, author, date
`\LARGE`	14	18	handout title
`\huge`	20	30	chapter heads
`\Huge`	24	36	part titles

Table 3.2: A list of LaTeX font sizes as defined by the Tufte-LaTeX document classes.

Environment	Font size	Notes
Body text	10/14×26 pc	
Block quote	9/12×24 pc	Block indent (left and right) by 1 pc
Sidenotes	8/10×12 pc	Sidenote number is set inline, followed by word space
Captions	8/10×12 pc	

Table 3.3: Environment styles used in *Beautiful Evidence*.

Margin	Length
Paper width	8 1/2 inches
Paper height	11 inches
Textblock width	6 1/2 inches
Textblock/sidenote gutter	3/8 inches
Sidenote width	2 inches

Table 3.4: Here are the dimensions of the various margins used in the Tufte-handout class.

Environment	Font size	Notes	Extra column
Body text	10/14×26 pc		Whatever we need etc, etc, etc, etc, etc ...
Block quote	9/12×24 pc	Block indent (left and right) by 1 pc	
Sidenotes	8/10×12 pc	Sidenote number is set inline, followed by word space	
Captions	8/10×12 pc		Another item here ...

Table 3.5: Environment styles modifications used in *Beautiful Evidence*....

3.2 *Tables from Other Sources*

ABOUT THE TABLES from other sources: Quisque ullamcorper placerat ipsum. Cras nibh. Morbi vel justo vitae lacus tincidunt ultrices. Lorem ipsum dolor sit amet, consectetuer adipiscing elit. In hac habitasse platea dictumst. Integer tempus convallis augue. Etiam facilisis. Nunc elementum fermentum wisi. Aenean placerat. Ut imperdiet, enim sed gravida sollicitudin, felis odio placerat quam, ac pulvinar elit purus eget enim. Nunc vitae tortor. Proin tempus nibh sit amet nisl. Vivamus quis tortor vitae risus porta vehicula.

- a wide table, `tb-tufte-wide-extraColumn`, Table 3.5 from[1], and
- a sideways table, `tb-cover-sideways-results`, Table 3.7.
  NOTE: to get the table number printed here, we had to move the label AFTER the caption!!!.

Quisque ullamcorper placerat ipsum. Cras nibh. Morbi vel justo vitae lacus tincidunt ultrices. Lorem ipsum dolor sit amet, consectetuer adipiscing elit. In hac habitasse platea dictumst. Integer tempus convallis augue. Etiam facilisis. Nunc elementum fermentum wisi. Aenean placerat. Ut imperdiet, enim sed gravida sollicitudin, felis odio placerat quam, ac pulvinar elit purus eget enim. Nunc vitae tortor. Proin tempus nibh sit amet nisl. Vivamus quis tortor vitae risus porta vehicula.

symbol	short name	brief description
L	coordDim	instance size
L'	coordDim′	instance size under skew-symmetry $(L+1)/2$
σ_0	seedInit	initial seed integer
$\underline{\varsigma}_0$	coordInit	initial coordinate
$\Theta(\underline{\varsigma}_0)$	valueInit	initial value
$\underline{\varsigma}_j$	coordPivot	pivot coordinate
$\Theta(\underline{\varsigma}_j)$	valuePivot	pivot value
$\underline{\varsigma}_j^i$	coordNeighb	pivot neighbor coord.
$\mathcal{N}(\underline{\varsigma}_j)$	coordNeighbSet	full neighborhood set of pivot coordinate
$\mathcal{N}_{saw}(\underline{\varsigma}_j)$	sawNeighbSet	SAW neighborhood set
ω_c	walkSegmCoef	walk segment coefficient
$\omega_{lmt} = \omega_c \times L'$	walkSegmLmt	walk segm. length limit
$Walk_\omega = = \{\underline{\varsigma}_0, \ldots, \underline{\varsigma}_\omega\}$	walkList	walk list after ω steps

For `labs` problems with an odd value of L, $L' = (L+1)/2$ represents a *de facto* instance size under skew-symmetry.

symbol	short name	brief description
t	runtime	CPU runtime
t_{lmt}	runtimeLmt	solver timeout value
τ	cntProbe	# of function probes
ρ	cntRestart	# of walk restarts
β	cntTrapped	# of trapped solutions
$\underline{\varsigma}^*$	coordBest	best coordinate
$\Theta(\underline{\varsigma}^*)$	valueBest	best value
Θ_L^{ub}	valueTarget	best upper bound
	isCensored	solution status: 1 if $t >= t_{lmt}$; 0 otherwise
	targetReached	solution status: 0 if $\Theta(\underline{\varsigma}^*) > \Theta_L^{ub}$, 1 if $\Theta(\underline{\varsigma}^*) = \Theta_L^{ub}$, 2 if $\Theta(\underline{\varsigma}^*) < \Theta_L^{ub}$
N	sampleSize	# of instances and initial seeds in the experiment
$\mathcal{H}(sid, \Theta_L^{ub})$	hitRatio	# of uncensored solutions under targetReached = 1 divided by sampleSize N
$\mathcal{S}(sid, \Theta_L^{ub}, p)$	asymptotic solvability	predicted waiting time to satisfy $\mathcal{H}(...) = 1$ with solver *sid*, probability p

For `labs` problems, $\Theta(\underline{\varsigma}^*)$ represents the *minimum energy value* returned by the solver.

Table 3.6: Summary of notation: symbols, names, and descriptions.

Table 3.7: A statistical summary of experimental results. For each instance, sample size ≤ 100 as shown column *ss2cf* (as the first number).

								SAW method = wanderU						SAW method = meanderU							
								walkL		cntProbe			runtime			walkL		cntProbe			runtime
instance	**cols**	**rows**	**vBK**	**vBest**	**card**	**ss2cf**	**hitR**	**mean**	**med**	**mean**	**std**	**speed**	**runLmt**	**ss2cr**	**hitR**	**mean**	**med**	**mean**	**std**	**speed**	**runLmt**

More About Algorithms

Algorithms in this chapter have been created for further testing of this template. Currently, we expect algorithms placed into different chapters to have a running counter that spans all chapters – unlike Figures and Tables that have a two part counter: `byChapter.byInCapterCounter`.

Question is: can the template be tweaked to generate algorithm counter in the same style as we have for Figures and Tables.

In addition: we also illustrate two algorithms that are embedded into the figures environment.

The example of Algorithm 7 is normal width on a half-page. The example of Algorithm 8 is full width on a half-page.

The example of Figure 4.1 is in two columns on a half-page. The example of Figure 4.2 is in two columns on a full-page. The figure environment can clearly be used to reference the any algorithm within the figure environment.

Algorithm 7 Procedure newPivot2.saw – normal width.

procedure `newPivot.saw`($\underline{\varsigma}_{\omega_s-1}, Walk_{\omega_s-1}$)
  $\mathbb{Z} \leftarrow i = 1, 2, \ldots, L$
  $\mathbb{Z}_p \leftarrow permute(\mathbb{Z})$
  $\mathcal{N}(\underline{\varsigma}_{\omega_s-1}) \leftarrow \{\underline{\varsigma}^i_{\omega_s-1} | d(\underline{\varsigma}_{\omega_s-1}, \underline{\varsigma}^i_{\omega_s-1}) = 1, i \in \mathbb{Z}_p\}$
  $\mathcal{N}_{saw}(\underline{\varsigma}_{\omega_s-1}) \leftarrow \{\mathcal{N}(\underline{\varsigma}_{\omega-1}) | \underline{\varsigma}^i_{\omega_s-1} \notin Walk_{\omega_s-1}\}$
  if $\mathcal{N}_{saw}(\underline{\varsigma}_{\omega_s-1}) \neq \emptyset$ **then**
    $\underline{\varsigma}_{\omega_s} : \Theta(\underline{\varsigma}_{\omega_s}) \leftarrow$ `bestNeighbor`$(\mathcal{N}_{saw}(\underline{\varsigma}_{\omega_s-1}))$
    $Walk_{\omega_s} \leftarrow Walk_{\omega_s-1} \cup \{\underline{\varsigma}_{\omega_s}\}$
    $\tau \leftarrow \tau + |\mathcal{N}_{saw}(\underline{\varsigma}_{\omega_s-1})|$ ▷ update *cntProbe*
  else ▷ **deal with a trapped pivot**
    $\beta = \beta + 1$
    $\underline{\varsigma}_{\omega_s} : \Theta(\underline{\varsigma}_{\omega_s}) \leftarrow$ `coordInit`() ▷ re-initialize
    $Walk_{\omega_s} \leftarrow \{\underline{\varsigma}_{\omega_s}\}$
    $\tau \leftarrow \tau + 1$ ▷ update *cntProbe*
  end if
  return $Walk_{\omega_s} : \underline{\varsigma}_{\omega_s} : \Theta(\underline{\varsigma}_{\omega_s})$
end procedure

Algorithm 8 Procedure newPivot2.saw – using algorithm-wide environment.

procedure `newPivot.saw`($\underline{\varsigma}_{\omega_s-1}, Walk_{\omega_s-1}$)
  $\mathbb{Z} \leftarrow i = 1, 2, \ldots, L$
  $\mathbb{Z}_p \leftarrow permute(\mathbb{Z})$
  $\mathcal{N}(\underline{\varsigma}_{\omega_s-1}) \leftarrow \{\underline{\varsigma}^i_{\omega_s-1} | d(\underline{\varsigma}_{\omega_s-1}, \underline{\varsigma}^i_{\omega_s-1}) = 1, i \in \mathbb{Z}_p\}$
  $\mathcal{N}_{saw}(\underline{\varsigma}_{\omega_s-1}) \leftarrow \{\mathcal{N}(\underline{\varsigma}_{\omega-1}) | \underline{\varsigma}^i_{\omega_s-1} \notin Walk_{\omega_s-1}\}$
  if $\mathcal{N}_{saw}(\underline{\varsigma}_{\omega_s-1}) \neq \emptyset$ **then**
    $\underline{\varsigma}_{\omega_s} : \Theta(\underline{\varsigma}_{\omega_s}) \leftarrow$ `bestNeighbor`$(\mathcal{N}_{saw}(\underline{\varsigma}_{\omega_s-1}))$
    $Walk_{\omega_s} \leftarrow Walk_{\omega_s-1} \cup \{\underline{\varsigma}_{\omega_s}\}$
    $\tau \leftarrow \tau + |\mathcal{N}_{saw}(\underline{\varsigma}_{\omega_s-1})|$ ▷ update *cntProbe*
  else ▷ **deal with a trapped pivot**
    $\beta = \beta + 1$
    $\underline{\varsigma}_{\omega_s} : \Theta(\underline{\varsigma}_{\omega_s}) \leftarrow$ `coordInit`() ▷ re-initialize
    $Walk_{\omega_s} \leftarrow \{\underline{\varsigma}_{\omega_s}\}$
    $\tau \leftarrow \tau + 1$ ▷ update *cntProbe*
  end if
  return $Walk_{\omega_s} : \underline{\varsigma}_{\omega_s} : \Theta(\underline{\varsigma}_{\omega_s})$
end procedure

```

The procedure `lssMAts` on the left is an instrumented versions of the `labs` solver named as MA_{TS} in cite *Lib-OPUS-labs-2009-ASC-Gallardo-memetic*. Settings of all parameters, used also in our experiments, are described in cite *Lib-OPUS-labs-2009-ASC-Gallardo-memetic*. See a concise reprise below.

setting	**value**
population size:	100
mutation probability:	$2/(L+1)$
crossover probability:	0.9
tournament selection size:	2
crossover:	uniform
tabu search walk length:	a random choice from the range $[\frac{L}{2}, \frac{3L}{2}]$

```
1: procedure lssRRts(Θ_L^ub, t_lmt)
2:   pop_1 ← RandomBinarySequence(L)
3:   Evaluate(pop_1)
4:   Θ(ς*)← ValueBest(pop)
5:   while t < t_lmt and Θ(ς*) > Θ_L^ub do
6:     pop_1 ←RandomBinarySequence(L)
7:     pop_1 ←TabuSearch(pop_1)
8:     Evaluate(pop_1)
9:     Θ(ς*)← ValueBest(pop)
10:  end while
11: end procedure
```

Figure 4.1: We illustrate two instrumented versions of the `labs` solver named as MA_{TS} in cite *Lib-OPUS-labs-2009-ASC-Gallardo-memetic* under the caption "Pseudo code of the memetic algorithm".
